"You don't even know the engineering side of things and you are creating something that you want to be popular with the masses and give everyone something to use." "So you think when you are making something that you are going to make it popular and that it is going to turn a profit. Well it might for a few years, but then you are going to run out of people who want it, it is going to be too expensive, it is going to have too many parts and it is going to be unreliable." "Everything you are creating is going to need maintenance and upgrades and you don't even know what that is going to be like or how you are going to go about it. You are creating an expensive white elephant and if you do that then it is up to you if it becomes a white elephant." "So if you can make something that is useful and that is cheaper to make you are going to make more money." So there it is. That is the point of this post. It is the truth. What follows is a list of 50 things that you should know when you are building a business or product. Before I even got to the point that the post itself is at, I wanted to write this post. I have been running this blog since

June 2009 and I have yet to share all of this. I have shared a few things here and there and always keep these ideas coming. The post I am about to share with you though is my own. I have created all of these things and I have learned these things and I have tried some of them out. I have learned so much about the building of a business over the years. I have tried some things and some things didn't work out at all. Some of them did work out and some of them did not work out. So if you are starting something yourself and you are the one creating it then you should make sure you understand all of this. In the time that I have been doing this, the topic of human effort is what has been covered the most and has been the most talked about. Humans can do anything. We are born with a wealth of knowledge, skills and resources to help us survive. We are born with the ability to go places and to do things. We have the knowledge to create so much. f3e1b3768c
